First-strand cDNA was prepared from oligo-dT selected mRNA by priming with an XhoI oligo-dT primer. The resulting DNA:RNA hybrid was treated with RNase H and used as a template for DNA PolI-catalyzed second strand synthesis. After the addition of EcoRI adaptors, the ds-cDNAs were digested with XhoI and size-selected. The resulting molecules were directionally cloned into the EcoRI and XhoI sites of the HybrizAP lambda vector (Stratagene) and excised as pAD-CAL4 phagemids." a 226 c 210 g 194 t 52 others

/mote="Organ: Anthraconose-infected leaves from
two-week-old sorghum plants 48 hr after insculation;
Vector: pBluescript II from Lambda Zap II; Site_1: XhoI;
Site_2: EcoRI; Two-week-old sorghum plants (BTX 623
cultivar) were infected with pathogen (isolate FRM42I of
Collectrichum graminicola, which is a sorghum isolate)
RNA was prepared from infected leaves harvested from 45
seedlings 48 hours after inoculation. Note: young
seedlings (2 weeks old) exhibit juvenile resistant
reaction, which is an incompatible interaction. As they
grow older (4 weeks or older), plants resume susceptiblity
to anthraconose disease. The library was made from poly-A
RNA in the cloning vector lambda ZAP II. Clones to be
sequenced were prepared by mass excision. WarXINIG; While
most or all ESTs are expected to derive from the host
plant, no effort was made to eliminate ESTs deriving from
the pathogen."

/note="Organ: Anthracnose-infected leaves from
/note="Organ: Anthracnose-infected leaves from
two-week-old sorghum plants 48 hr after incculation;
vector: pBluescript II from Lambda Zap II; Site_1: XhoI;
Site_2: EcoRI; Two-week-old sorghum plants (BTX 623
cultivar) were infected with pathogen (isolate FRM41 of
Colletotrichum graminicola, which is a sorghum isolate).
RNA was prepared from infected leaves hrvested from 45
seedlings (2 weeks old) exhibit juvenile resistant
reaction, which is an incompatible interaction. As they
grow older (4 weeks or older), plants resume susceptiblity
to anthracnose disease. The library was made from poly-A
RNA in the cloning vector lambda ZAP II. Clones to be
sequenced were prepared by mass excision. WARNING: While
most or all ESTs are expected to derive from the host
the nathorsen "
    pathogen.

                                                                                                                                                  Sequences have been trimmed to exclude PolyA, vector and regions below Phred quality 16. The threshold for highest quality sequence is 20. Three-prime sequences, which are obtained with PolyTMix or T7 sequencing primer, are presented as the reverse complement. Seq primer: PolyTMix
                                                                                                                                                                                                                                                                                     Laboratory for Genomics and Bioinformatics

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        seedlings (2 weeks old) exhibit juvenile resistant reaction, which is an incompatible interaction. As they grow older (4 weeks or older), plants resume susceptiblity to anthracnose disease. The library was made from poly-A RNA in the cloning vector lambda ZAP II Clones to be sequenced were prepared by mass excision. WARNING: While most or all ESTs are expected to derive from the host plant, no effort was made to eliminate ESTs deriving from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   two-week-old sorghum plants 48 hr after inoculation; vector: pBluescript II from Lambda Zap II; Site_1: XhoI; Site_2: EcoRI; Two-week-old sorghum plants (BTX 623 cultivar) were infected with pathogen (isolate FRM42I of colletotrichum graminicola, which is a sorghum isolate) RNA was prepared from infected leaves harvested from 45 seedlings 48 hours after inoculation. Note: young

/note="Organ: Anthracnose-infected leaves from

/note="Organ: Anthracnose-infected leaves from

two-week-old sorghum plants 48 hr after inoculation;

vector: pBluescript II from Lambda Zap II; Site_1: Xho;

Site_2: EcoRI; Two-week-old sorghum plants (BTX 623)

cultivar) were infected with pathogen (isolate FRM42I of

Colletotrichum graminicola, which is a sorghum isolate).

RNA was prepared from infected leaves harvested from 45

seedlings 48 hours after inoculation. Note: young

seedlings (2 weeks old) exhibit juvenile resistant

reaction, which is an incompatible interaction. As they

grow older (4 weeks or older), plants resume susceptiblity

to anthracnose disease. The library was made from poly-A

RNA in the cloning vector lambda ZAP II. Clones to be

sequenced were prepared by mass excision. WARNING: While

most or all ESTs are expected to derive from the host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a

//note="Organ: Anthracnose-infected leaves from
two-week-old sorghum plants 48 hr after inoculation;
vector: pBluescript II from Lambda Zap II; Site_1: XhoI;
Site_2: EcoRI; Two-week-old sorghum plants (BTX 623)
cultivar) were infected with pathogen (isolate FRM42I of
Colletotrichum graminicola, which is a sorghum isolate).
RNA was prepared from infected leaves harvested from 45
seedlings (2 weeks old) exhibit juvenile resistant
reaction, which is an incompatible interaction. As they
grow older (4 weeks or older), plants resume susceptiblity
to anthracnose disease. The library was made from poly-A
RNA in the cloning vector lambda Zap II. Clones to be
sequenced were prepared by mass excision. WARNING: While
most or all ESTs are expected to derive from the host
plant, no effort was made to eliminate ESTs deriving from
the pathogen."

Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using CC the genes and promoters; (3) analysis of plant characteristics using the Experoxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene CC expression analysis. The set of genes are used for the analysis of the CC pattern of peroxidase gene expression in particular rice plants and CC and modification of rice plants to provide desired specificities of CC plants such as response to bacterial infection by Magnaporthe grisea. CC The present sequence represents a rice peroxidase encoded by a gene from CC the gene set described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms -

The present invention describes isolated polynucleotides and proteins CC encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), CC commarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase CC (CCR), phenylalanine ammonia-lyase (PAL), Cinnamyl-COA reductase CC (CCR), phenylalanine ammonia-lyase (PAL), 4-commarate:COA ligase (ACL), CC coniferol glucosyl transferases (CGT), coniferol plucosylase, ferulate-5-hydroxylase (F5H), alpha-amylase, CC caffeic acid methyl transferase, caffeoyl COA methyl transferase, CC commerate COA ligase, cytochrome p450 LXXIA, diphenol oxidase, flavanol CC glucosyl transferase, cytochrome p450 LXXIA, diphenol oxidase, flavanol CC glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase, which are involved in the lignin biosynthetic pathway. The CC composition and the structure of a plant, especially eucalyptus and pine CC composition and the structure of a plant, especially eucalyptus and pine CC species, and for modifying the activity of an enzyme involved in lignin CC species, and for modifying the activity of an enzyme involved in probes CC and primers useful for detecting similar DNA and RNA sequences in any cransism and for DCP amplification. The lignin content can be efficiently

The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are given in AnH44071 to AnH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using CC the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed in the sample plant; and (4) DNA microarrays for peroxidase gene cc expression analysis. The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and CC pattern of peroxidase gene expression in particular rice plants and CC and modification of rice plants to provide desired specificities of CC plants such as response to bacterial infection by Magnaporthe grisea.

The present sequence represents a rice peroxidase encoded by a gene from the gene set described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New set of rice peroxidase genes for analysis of peroxidase expression in rice under varying conditions and production of rice plants with desired characteristics \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Page 174-176; 258pp; Japanese

The present invention describes isolated polynucleotides and proteins commarate 3-hydroxylase (C3H), phenolase (PML), O-methyl transferase (C4H), counsarate 3-hydroxylase (C3H), phenolase (PML), O-methyl transferase (CMT), cinnamyl alcohol dehydrogenase (CAD), cinnamyl-CoA reductase (CCR), phenylalanine ammonia-lyase (PAL), 4-counsarate:COA ligase (4CL), CC coniferol glucosyl transferase, (CGT), coniferon beta-glucosidase (CBC), CC caffeic acid methyl transferase, caffeoyl cOA methyl transferase, CCC counserate COA ligase, cytochrome P450 LXALA, diphenol oxidase, flavanol CC counserate COA ligase, cytochrome P450 LXALA, diphenol oxidase, flavanol CC counserate COA ligase, cytochrome P450 LXALA, diphenol oxidase, flavanol CC counserate COA ligase, cytochrome P450 LXALA, diphenol oxidase, flavanol CC counserate COA ligase, plavanoid hydroxylase, and isoflavone reductase, CCC which are involved in the lignin biosynthetic pathway. The CC composition and the structure of a plant, especially eucalyptus and pine CC content, composition and structure of a plant having altered lignin CC content, composition and structure. They can be used for designing probes CC and primers useful for detecting similar DNA and RNA sequences in any creations and for PCR amplification. The lignin content can be efficiently condified using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Plant; lignin;

                                                                            Вþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are CC given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using CC the genes and promoters; (3) analysis of plant characteristics using the CC peroxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed CC in the sample plant; and (4) DNA microarrays for peroxidase gene expressed CC expression analysis. The set of genes are used for the analysis of the CC expression analysis. The set of genes are used for the analysis of the middle component tissues and under different environmental conditions, CC and modification of rice plants to provide desired specificities of CC peroxidase gene expression to impart particular characteristics to the CC plants such as response to bacterial infection by Magnaporthe grisea.

CC The present sequence represents a rice peroxidase encoded by a gene from CC the described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Herbicidal; plant; agriculture; herbicide

The present invention describes a set of peroxidase genes found in CC plants, especially rice, and their homologues, modified forms and CC fragments, where the sequences of the peroxidase genes in the set are CC given in AAH44071 to AAH44091. Also described are: (1) promoters for the CC control of the gene set; (2) the preparation of cassette vectors using CC the genes and promoters; (3) analysis of plant characteristics using the CC peroxidase set by isolating RNA from the plant, binding the RNA to a CC membrane, mixing with a labelled peroxidase gene set, incubating, and CC detecting the label signal to show which genes in the set are expressed CC in the sample plant; and (4) DNA microarrays for peroxidase gene CC expression analysis. The set of genes are used for the analysis of the CC pattern of peroxidase gene expression in particular rice plants and CC their component tissues and under different environmental conditions, CC and modification of rice plants to provide desired specificities of CC plants such as response to bacterial infection by Magnaporthe grisea. CC The present sequence represents a rice peroxidase encoded by a gene from the gene set described above.
                                                                                                                                      Qy

                                                                                                                                                                               The present invention describes isolated polynucleotides and proteins CC encoding and representing the enzymes cinnamate 4-hydroxylase (C4H), CC coumarate 3-hydroxylase (C3H), phenolase (PNL), O-methyl transferase CC (CMT), cinnamyl alcohol dehydrogenase (CAD), cinnamyl-CoA reductase CC (CCR), phenylalanine ammonia-lyase (PAL), 4-coumarate:COA ligase (4CL), CC coniferol glucosyl transferase (CGT), coniferin beta-glucosidase (CBG), CC caffeic acid methyl transferase, caffeoyl COA methyl transferase, CC coumerate COA ligase, cytochrome P450 LIXIA, diphenol oxidase, flavanol CC glucosyl transferase, flavenoid hydroxylase, and isoflavone reductase, which are involved in the lignin biosynthetic pathway. The CC composition and the structure of a plant, especially eucalyptus and pine CC polynucleotides can be used for modulating lignin content, lignin CC content, composition and structure. They can be used for designing probes CC and primers useful for detecting similar DNA and RNA sequences in any CC confished using the polynucleotides. AAA67908 to AAA68201 and AAB16341 to AXB16449 represent polynucleotides and protein sequences used in the CC exemplification of the present invention.

The present invention describes a set of peroxidase genes found in plants, especially rice, and their homologues, modified forms and fragments, where the sequences of the peroxidase genes in the set are given in AnH44071 to AnH44091. Also described are: (1) promoters for the control of the gene set; (2) the preparation of cassette vectors using the genes and promoters; (3) analysis of plant characteristics using the peroxidase set by isolating RNA from the plant, binding the RNA to a membrane, mixing with a labelled peroxidase gene set, incubating, and detecting the label signal to show which genes in the set are expressed
                                                                                                                                              Disclosure;

The set of genes are used for the analysis of the pattern of peroxidase gene expression in particular rice plants and their component tissues and under different environmental conditions, and modification of rice plants to provide desired specificities of peroxidase gene expression to impart particular characteristics to the plants such as response to bacterial infection by Magnaporthe grisea. The present sequence represents a rice peroxidase encoded by a gene from the gene set described above.

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /notes "Organ: green seedlings; Vector: pAD-GAL4; Site_1: ECORI; Site_2: XhoI; ds-cDNA molecules were generated as follows. First-strand cDNA was prepared from oligo-dT selected mRNA by priming with an XhoI oligo-dT primer. The resulting DNA:RNA hybrid was treated with RNAse H and used as a template for DNA PolI-catalyzed second strand synthesis. After the addition of EcoRI adaptors, the ds-cDNAs were digested with XhoI and size-selected. The resulting molecules were directionally cloned into the EcoRI and XhoI sites of the HybrilAP lambda vector (Stratagene) and excised as pAD-GAL4 phagemids."

First-strand cDNA was prepared from oligo-dr follows. RNA by priming with an XhoI oligo-dr primer. The resulting DNA:RNA hybrid was treated with RNAse H and used as a template for DNA PolI-catalyzed second strand synthesis. After the addition of EcoRI adaptors, the ds-cDNAs were digested with XhoI and size-selected. The resulting molecules were directionally cloned into the EcoRI and XhoI sites of the HybridaP lambda vector (Stratagene) and excised as pAD-GAL4 phagemids. "

(Stratagene) and excised as pAD-GAL4 phagemids."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seedlings (2 weeks old) exhibit juvenile resistant reaction, which is an incompatible interaction. As they grow older (4 weeks or older), plants resume susceptibility to anthracnose disease. The library was made from poly-A RNA in the cloning vector lambda ZAP II. Clones to be sequenced were prepared by mass excision. WARNING: while most or all ESTs are expected to derive from the host plant, no effort was made to eliminate ESTs deriving from the pathogen."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vector: pBluescript II from Lambda Zap II; Site_1: XhoI; Site_2: EcoRI; Two-week-old sorghum plants (ETX 623 cultivar) were infected with pathogen (isolate FRM42I of Colletotrichum graminicola, which is a sorghum isolate). RNA was prepared from infected leaves harvested from 45 seedlings 48 hours after inoculation. Note: young

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vector: pBluescript II from Lambda Zap II; Site_1: XhoI; Site_2: EcoRI; Two-week-old sordhum plants (BTX 623: cultivar) were infected with pashbogen (isolate pEMAZI of Colletotrichum graminicola, which is a sorghum isolate). RNA was prepared from infected leaves harvested from 45 seedlings (2 weeks old) exhibit juvenile resistant reaction, which is an incompatible interaction. As they grow older (4 weeks or older), plants resume susceptibility to anthracnose disease. The library was made from poly-A RNA in the cloning vector lambda ZAP II. Clones to be sequenced were prepared by mass excision. WARRING: While most or all ESTs are expected to derive from the host plant, no effort was made to eliminate ESTs deriving from the pathogen."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0;
